Customer specific cable harness solutions

More than 20 years of engineering, design and manufacturing experience with high quality customer specific cables. We are dedicated to minimize your total supply chain costs, from choice of wire and connector systems to optimal design for assembly and flexible delivery services.

Multiple wire harness

Plug and play solutions for direct mounting into machinery. Designed to avoid errors in your assembly by using various types of coding, including printed or coded connector housings, all 100% electrical tested.

- Easy installation
- Flexible and user-friendly
- Long durability

Moulded solutions

Flexible solutions for harsh environments, with mechanical and IP-class protection. Unique product solutions including strain reliefs, grommets, branching and fastening systems.

- Optimal tactility
- Easy installation
- 3D structures

Sub assembly

Cable harness solutions built into enclosures, mounting plates or other mechanical parts. Taped, braided or in protection tubes to avoid mechanical stress. Designed for easy assembly into your machinery.

- Seamless optical clear lamination
- Cost efficient touch solution

Control/signal cables

Single wire & multicore cable solutions design optimized for in-door & out-door use across market segments such as industrial, electronic, off-shore and agriculture. Highly automated production with lead time from 5 days.

- One-stop-shop
- System integration
- Module solution

We deliver more than a product
when we create leading cable solutions together

Improve product value by optimizing cable design for use and manufacturing.

Reduce supply chain costs by balancing production processes with logistic & quality requirements.

Optimize time to market with rapid prototyping and short production lead times.

> Continuous improvement

Maximum value with minimum resources

We are dedicated to provide industry leading quality with short lead times and minimum resources. This is only possible with continuous optimization of all processes to ensure we remain competitive together.

Design Engineering

Combining material & IPC knowledge with process experience we engineer the optimal cable solution design ready for efficient volume production.

Flexible Lean Production

A high level of flexibility and efficiency is ensured through a number of independent lean production flows with different core competencies.

Quality Assurance

Automated production processes and internal quality control with optional FAI and PPAP to ensure industry leading quality levels.

Creating together

Partnership, cooperation and communication

You get one team of dedicated contacts who know you, your business and your market. We keep focus on your project, your costs and your production possibilities. We will challenge you in the development process and cost optimize throughout the production process. Our goal is very clear - **to work for you and with you.**

> Sparring > Development > Optimization > Experience

”

With this outsourcing, we save time, space and resources to enable us to concentrate fully on our core expertise: our frequency converters. The size of our own supply chain has been reduced, we have gained more production space and have become more flexible. Before, during and after the outsourcing process, Mekoprint Cables have shown themselves to be extremely accommodating and flexible in terms of our requirements, but we also continuously receive good advice and suggestions for improvements. That is why it was a natural step for us to make Mekoprint Cables a Preferred Partner.

Mr. Alexandre Allaire

Head of Category, Senior Director, Danfoss Procurement
